

With SHL Technology: Progress goes on!

SHL AG Special Newsletter July 2012

Dear Ladies and Gentlemen,

Your data and production know-how are the most important factors for your company's success. What about your data safety though?

In this issue, we would like to tell you more about how to reliably and systematically protect and secure the data in your **SHL system**.

Also in this edition: our special promotion - Don't miss the last chance to buy our plants with the KRC2-control or ask for a professional training.

Data backup: How to do it.

Regularly replace the buffer batteries in your IPC and robot control.

Performance of data backup at the robot and/or IPC with a spare hard disc or image CD.

Alternatively you can perform the backup via standardized USB interface.

If your system does not have a USB interface, contact our service department for retrofit solutions.

Consistent data backup is important. Therefore, regularly back up all your data in your SHL robot system. This is particularly important for older systems and equipment.

For further information and competent support, Guido Nestel (After Sales Service) will be gladly available to you - call +49 7429 93 04 55

or send your email... :

Progress goes on: Kuka transforms KRC2 into KRC4

Don't miss this opportunity: You can only order the Kuka KRC2 control until July 30th , 2012; Starting 2013, we will only deliver our **SHL plants** with the more powerful KRC4 control unit. Kuka, our partner for robot and control technology, expands its current product range with the KRC4.

This is how to properly implement your capacity expansions! Note – don't forget to plan an appointment for your current KRC2 in the **SHL training center** or on site in your company.

Starting January 2013, the **SHL college** will be completely focused on KRC4. Until then **SHL** offers trainings for both controls (KRC2 and KRC4). Of course we will keep offering you trainings at your own plants.
